

MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Laboratory for Nuclear Science

CAMBRIDGE, MASSACHUSETTS 02139

5 April 2023

Employment Certificate

This is to certify that Mr. Sichen Li has been working on the Alpha Magnetic Spectrometer Experiment (AMS) at the European Organization for Nuclear Research (CERN), CERN ID 152165, since November 2017.

AMS is a very precise particle physics detector operating on the International Space Station since 2011, using the unique environment of space to study the universe, with the purpose to search for antimatter and the origin of dark matter and to perform precision measurements of charged cosmic rays. AMS has collected over 200 billion cosmic ray events and will continue to collect and analyze data over the life of the ISS.

Mr. Li first started working for AMS in November 2017 as a Scientific Researcher at RWTH Aachen University in Germany, and he will soon finalize his PhD Degree in AMS.

Mr. Li's work at AMS focused on Nuclei Analysis, and he also participated in running the experiment on shifts in the AMS Payload Operations Control Center at the Prévessin site of CERN in France. He consistently carried out excellent research work throughout his time at AMS and I am pleased to provide him with a recommendation.

A handwritten signature in black ink that reads "Joseph Burger".

Joseph Burger
AMS-02 Thermal Group Leader
Senior Research Scientist Massachusetts Institute of Technology

Guest Professor
Shandong University
